Close-Up of W3PG

There was a lot of neck-cranning in the vicinity of State and Montgomery Streets. Pedestrians gazed skyward to watch a tiny object moving about the electrical sign of the Broad Street National Bank, high above the 12-story bank building. This is a close-up. It shows Clem Giberson, an engineer for the State Forest Fire Service, who went aloft to repair the service's radio antenna, attached to the bank sign. The antenna was damaged during last week's snowstorm. Dwarfed by the huge sign, Giberson looked like an ant from the street as he made his way up and down the steel framework of the sign.
